1. **AI Technologies Used:** Chat GPT
2. **Goal In Using Technology:** To speed up the assignment
3. **Advantages:** Chat GPT generates large amounts of text in a specified format very fast, ensuring we did not have to deal with formatting markdown or UML for diagram generation.
4. **Disadvantages:** Chat GPT is very bad at designing large systems, and often inferred incorrect information rather than asking for clarification. For instance, when asking it to format our API endpoints it would create new ones which we did not need to include.
5. **Reliance on ChatGPT:** Less than 15% of the design was generated by Chat GPT, but nearly 85% of the text was formatted into markdown or UML using Chat GPT.
